SUMMARY

A detail-oriented and security-focused BTech student with hands-on experience in cybersecurity, AI engineering, and enterprise-grade application development. Built a full secure password manager using encryption and won a competition for it. Experienced with Generative AI, agentic workflows, and tools like Veo, Flow, Warp, and have also won an AI & Branding competition. Actively seeking a research-focused internship to apply technical skills and grow in AI-driven security systems.

SKILLS

Cybersecurity	Burp Suite, Nmap, OWASP Top 10, Vulnerability Scanning, Basic Recon & Pentesting, VAPT and Red Teaming
AI & Agentic Tools:	Veo, Warp, Flow, Lumina, Generative AI Workflows, Prompt Engineering, AI Automation
Web Development :	HTML, CSS, JavaScript, PHP, MySQL, Firebase (Auth, Firestore, Cloud Functions)
Frameworks & Technologies :	REST APIs, Responsive UI, Basic Python Automation, Git, API Integration
Tools :	VS Code, Firebase Console, GitHub, Burp Suite, Nmap
Operating Systems:	Windows, Linux (Basic)

PROJECTS

XVALT – Secure Password Manager (3rd Prize, College Business Plan Competition)

- Developed XVALT, an **AES-256 (CBC)** encrypted password manager with **PBKDF2**, per-entry **salt/IV**, secure **Firebase backend**, **PyQt5** vault UI, encrypted sync, and structured master-password workflow.
- Conducted a **full VAPT** on **XVALT**, including **application-layer testing**, **Firebase rules assessment**, **local code-injection** & **reverse-shell simulations**, and delivered a detailed security report with findings and mitigations.

Secure Data Wiping Tool

- Developed a Secure Data Wiping Tool implementing **DoD-5220.22-M** and custom multi-pass overwrite schemes, **buffer-level zeroization**, secure temp-file purge routines, and post-wipe entropy verification to **mitigate forensic recovery vectors**.

EXPERIENCE

Cyber Security Trainee

DUCAT – The IT Training School | PCTE Institute of Engineering & Technology, Ludhiana

June 2025 – July 2025

- Completed an intensive 6-week cybersecurity training program.
- Worked with Cisco Packet Tracer to learn networking fundamentals.
- Gained hands-on experience in Vulnerability Assessment & Penetration Testing (VAPT).
- Used tools including Nmap, Burp Suite, Metasploit, and Kali Linux OS.
- Learned foundational modules for CompTIA A+ and Security+.
- Built a Password Manager using Python & Flask, implementing encryption and secure storage.
- Strengthened practical cybersecurity, problem-solving, and real-world security concepts.

EDUCATION

Bachelor of Technology (B.Tech), CSE

PCTE Institute of Engineering & Technology (PCTE-IET), Ludhiana

2023 – 2027 (Currently in 5th Semester)

- Currently pursuing B.Tech with strong focus on cybersecurity, cloud technologies, and applied computer science.
- Actively building advanced security projects (password manager, anti-RAT tool, VAPT workflows, browser extensions).
- Participating in tech competitions, certifications, and hackathons to strengthen practical skills.
